PEOPLE & TECHNOLOGY

Smart Sizer

Airports need to manage the check-in and boarding of different airlines.

Each of these has different policies regarding the maximum allowable size and weight of hand luggage.

Because of these needs, each company must have a dedicated baggage dimensional verification sizer.

Furthermore, as policies change, an adaptation and replacement of the sizer follows.

To overcome this problem, Axcent has developed the **Smart Sizer**.

STATUS: Prototype

PRIMARY APPLICATION FIELDS

Airports

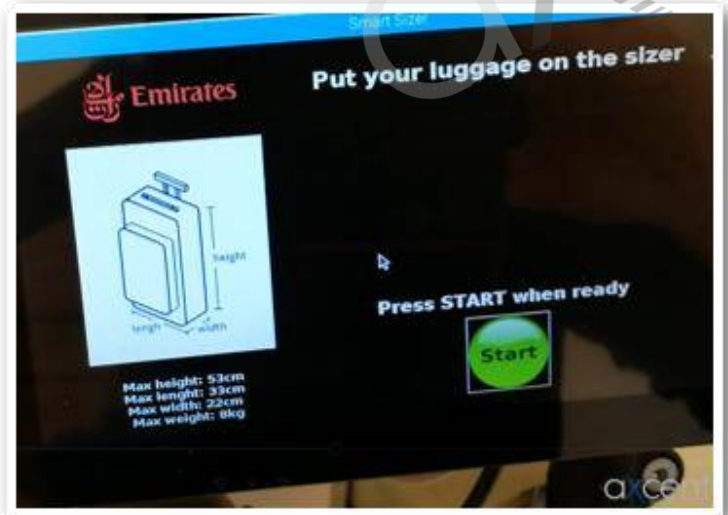

Logistic

Smart Sizer

Axcent' Smart Sizer allows to:

- Recognize the flight-company, thanks to a bar code reader, used on the flight ticket;
- Read and load the company luggage policy from a centralized database;
- Measure size and weight of the luggage;
- Check if size and weight are compliant with the specific company policy.

Main Features:

- It can be moved thanks to the four-wheels support;
- It has a really low power consumption;
- It is equipped with a touch screen monitor with an easy-to-use GUI;
- The database of the measure can be updated on-the-air.

Axcent is a company dealing with services and solutions in the field of engineering and Information Technology made up of a team of professionals engaged in the constant search for innovative technologies in behalf of its customers.
